Status Report:

ElectViz Election Data Visualization for Media

Nandini Nikhade •

Contents

Introduction: Why Election Visualization Matters for Media

Tools & Technology: Power BI Overview

The Foundation: Dataset Structure

The Logic: Custom DAX Functions

Phase 1: Election Data Analysis

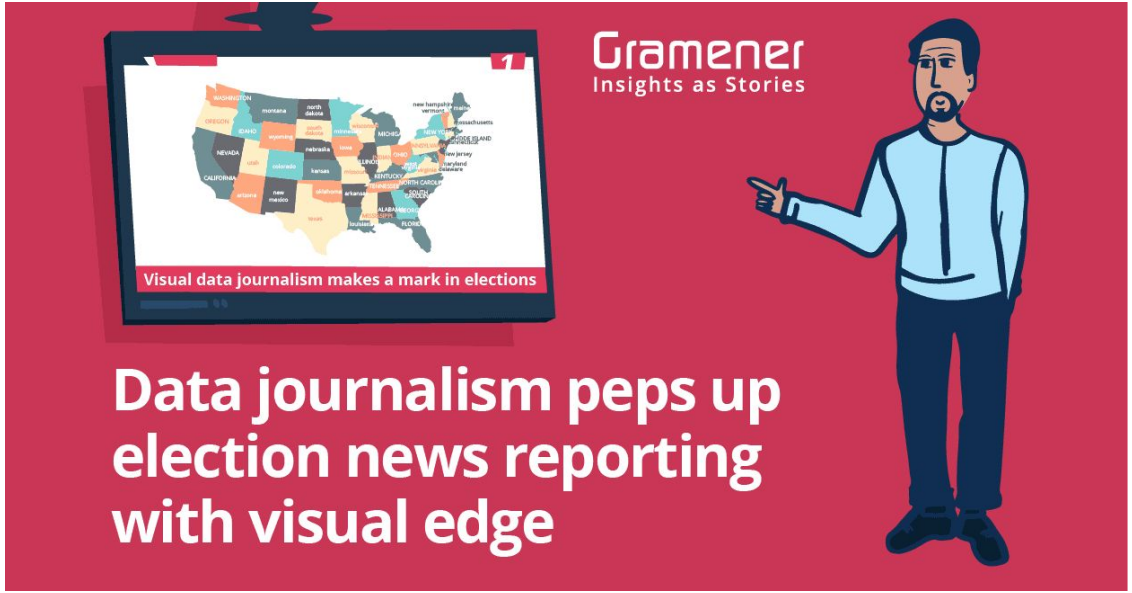
Phase 2: Historical Trends Analysis

Phase 3: Real-time Analysis & Voter Insights

Phase 4: Turnout & Demographic Deep-dive

Phase 5: Party & Candidate Performance

Election Data Visualization for Media



Why it matters:

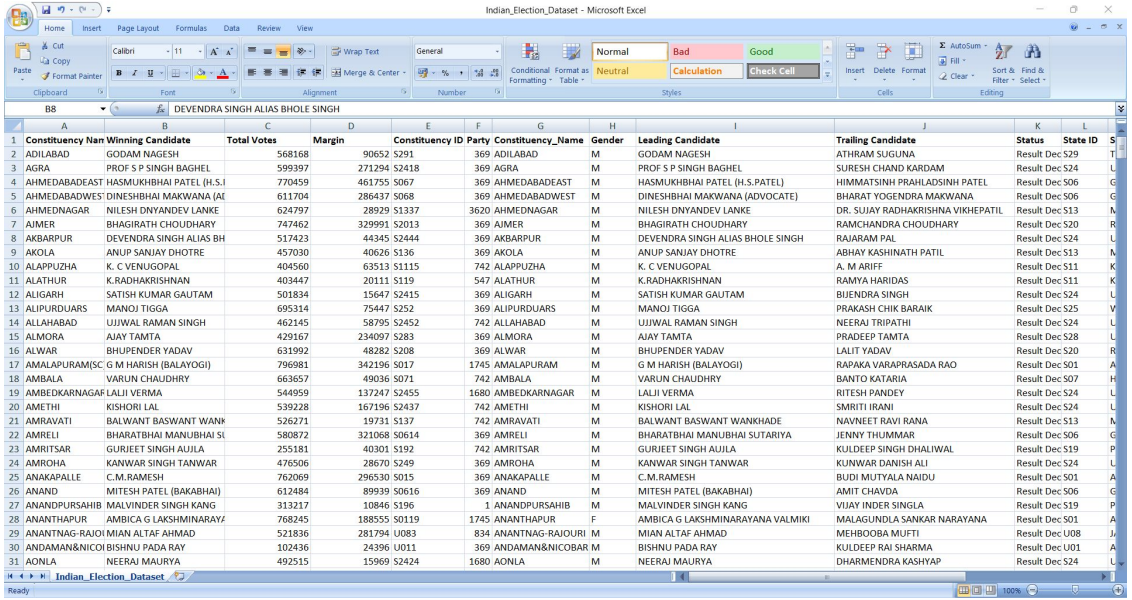
- **Instant Clarity:** Simplifies complex multi-party results into digestible visuals for live news broadcasts.
- **Contextual Storytelling:** Allows journalists to compare current results with historical benchmarks instantly.
- **Democracy at a Glance:** Highlights critical metrics like voter turnout and winning margins, which reflect the health of the democratic process.
- **Public Engagement:** Interactive maps and charts help the public find specific data about their own constituencies.

Power BI: The Engine Behind the Data

Key Capabilities:

- **Dynamic Connectivity:** Seamlessly handles large datasets (like the 1,551-row election file) to provide real-time updates.
- **Interactive Slicers:** Enables users to filter by State, Party, or Geography Type (Urban/Rural).
- **AI-Powered Insights:** Automatically detects trends and anomalies in voter behavior.
- **Scalability:** Perfect for creating a "Media Center" dashboard that can be shared across web and mobile platforms.

The Dataset - Indian Election Data



Constituency Nam	Winning Candidate	Total Votes	Margin	Constituency ID	Party	Constituency_Name	Gender	Leading Candidate	Trailing Candidate	Status	State ID
ADILABAD	GODAM NAGESH	568168	90652	S291	369	ADILABAD	M	GODAM NAGESH	ATHRAM SUGUNA	Result Dec	S29
AGRA	PROF S P SINGH BAGHEL	599397	271294	S2418	369	AGRA	M	PROF S P SINGH BAGHEL	SURESH CHAND KARDAM	Result Dec	S24

Structure & Components:

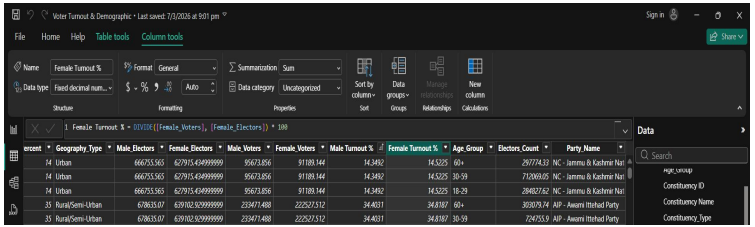
- **Granularity:** Data is organized by **Constituency ID** and **State ID**.
- **Key Metrics:** Total Votes, Winning Candidate, Margin, and Party ID.
- **Demographic Data:** Categorized by Gender (M/F), Age Groups (18-29, 30-59, 60+), and Geography (Rural/Urban).
- **Status Tracking:** Real-time tracking of "Leading" vs. "Trailing" candidates.

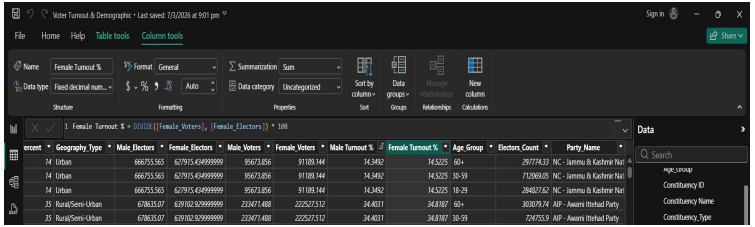
Technical Logic:

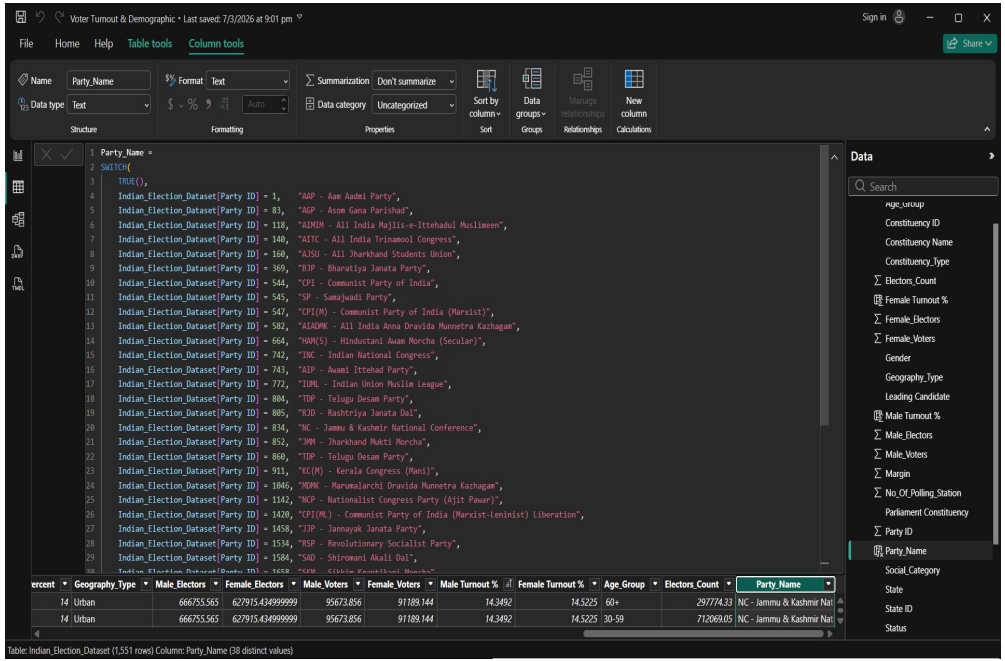
To transform raw numbers into insights, the following Data Analysis Expressions (DAX) were implemented:

- **Party Identification:**
  - `Party_Name = SWITCH(TRUE(), [Party ID] = 369, "BJP", [Party ID] = 742, "INC", ...)`
  - Purpose*:* Maps numeric IDs to human-readable party names.
- **Gender-Specific Turnout:**
  - `Male Turnout % = DIVIDE([Male_Voters], [Male_Electors]) * 100`
  - `Female Turnout % = DIVIDE([Female_Voters], [Female_Electors]) * 100`
  - Purpose*:* Calculates the percentage of registered voters who actually cast a ballot.

Technical Logic:

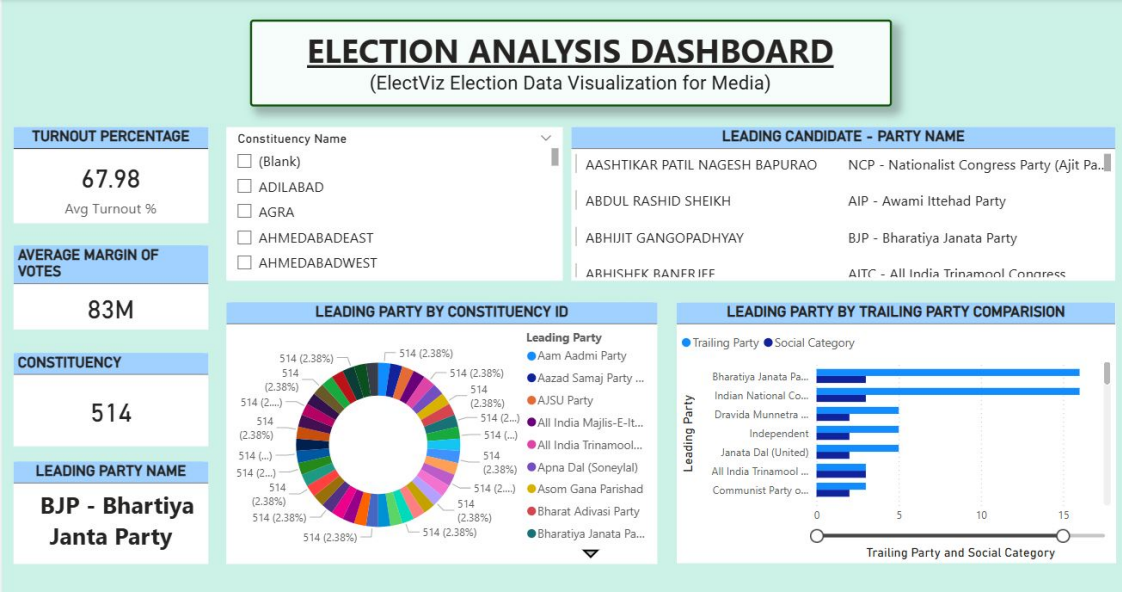






Tasks

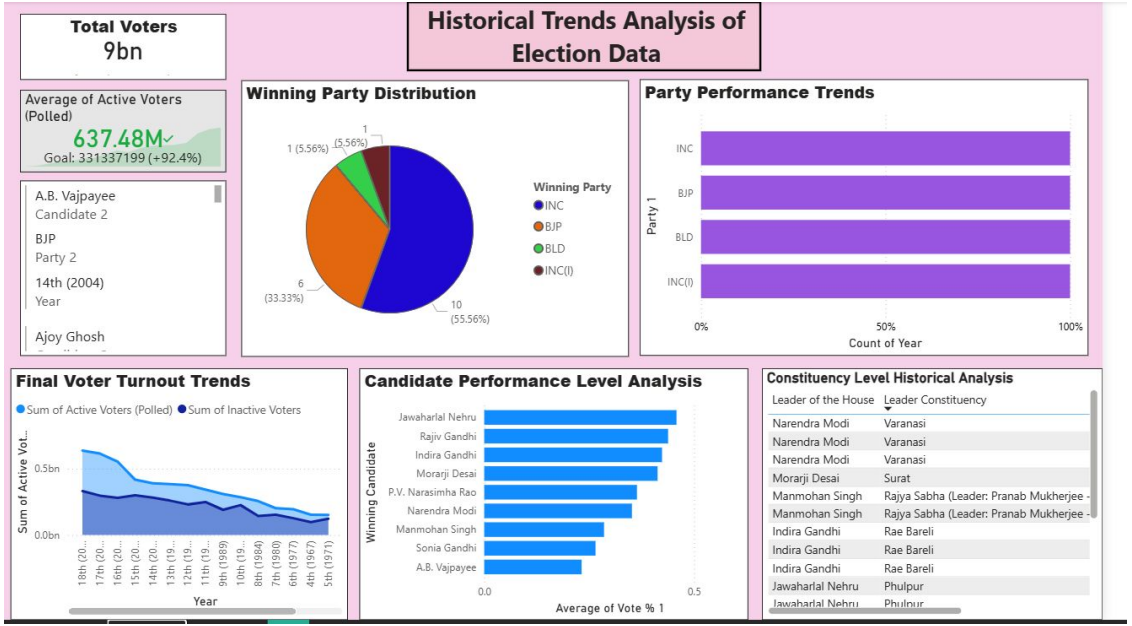
Task 1 - Election Analysis Dashboard



Focus: Granular Margin and Constituency Status.

- **Average Margin:** Calculated at **162K**, indicating the average "safety buffer" for winners.
- **Leading Party by State:** Stacked bar charts showing the ratio of Trailing vs. Leading parties across all Indian states/UTs.
- **Margin Distribution:** A histogram/line chart analyzing the count of leading parties categorized by their specific margin of votes.
- **Data Grid:** A live-action table showing specific constituencies (e.g., Anandpur Sahib, Hyderabad) with their leading candidates and exact margins.

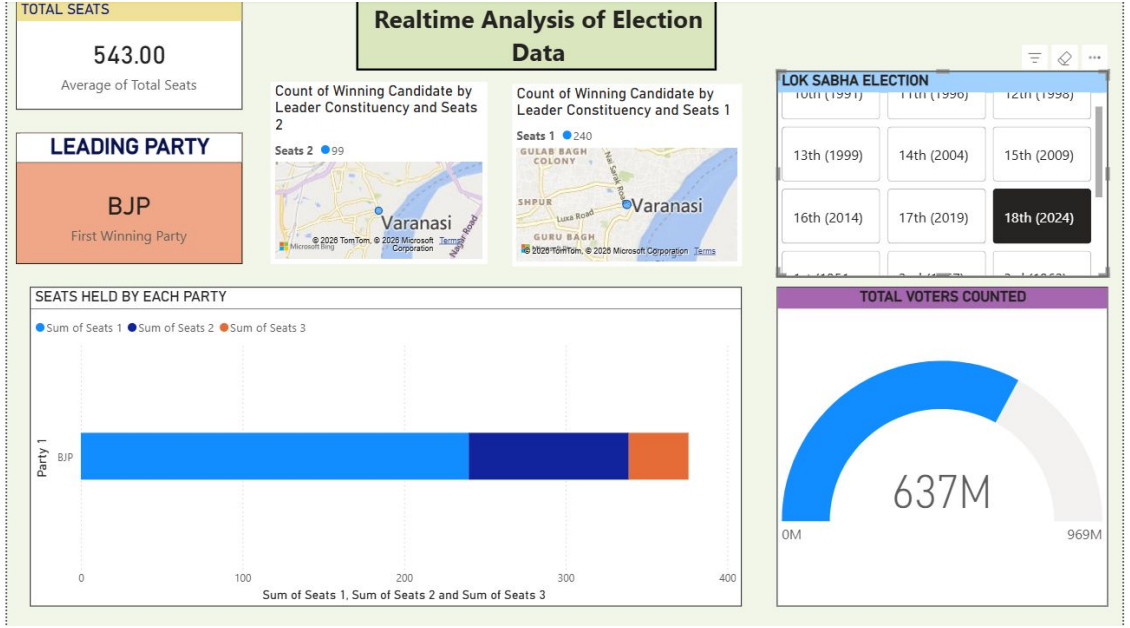
Task 2 - Historical Trends Analysis



Focus: Contextualizing the 2024 results against the past.

- **Winning Party Distribution:** A pie chart showing the historical dominance of parties (INC at 55.56%, BJP at 33.33%).
- **Voter Turnout Trends:** A line/area chart showing the fluctuation of active vs. inactive voters from the 5th (1971) to the 18th (2024) Lok Sabha.
- **Leadership Performance:** Bar chart comparing the average vote percentage of iconic leaders like Nehru, Indira Gandhi, and Narendra Modi.

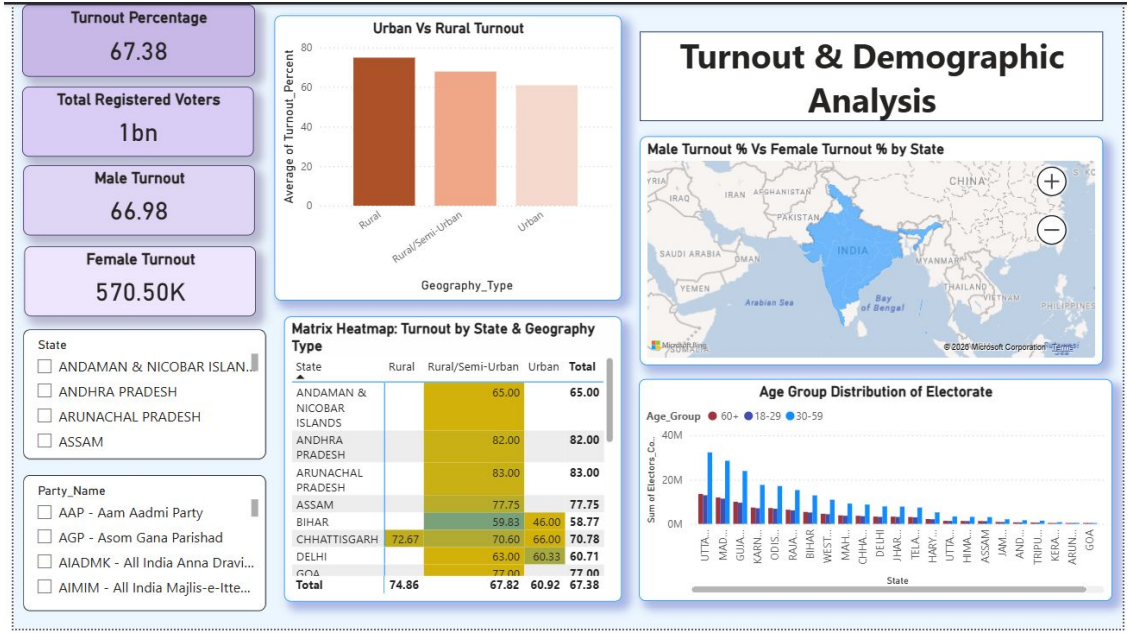
Task 3 - Real-time Analysis Dashboard



Focus: Identifying the front-runners and voter volume.

- **Total Seats:** 543.00 (Average calculation).
- **Leading Party:** Visualizing the primary winning party (BJP).
- **Voter Reach:** A gauge chart showing **637M Total Voters Counted** against the total electorate of 969M.
- **Geospatial Tracking:** Map integration for specific constituencies like **Varanasi**.

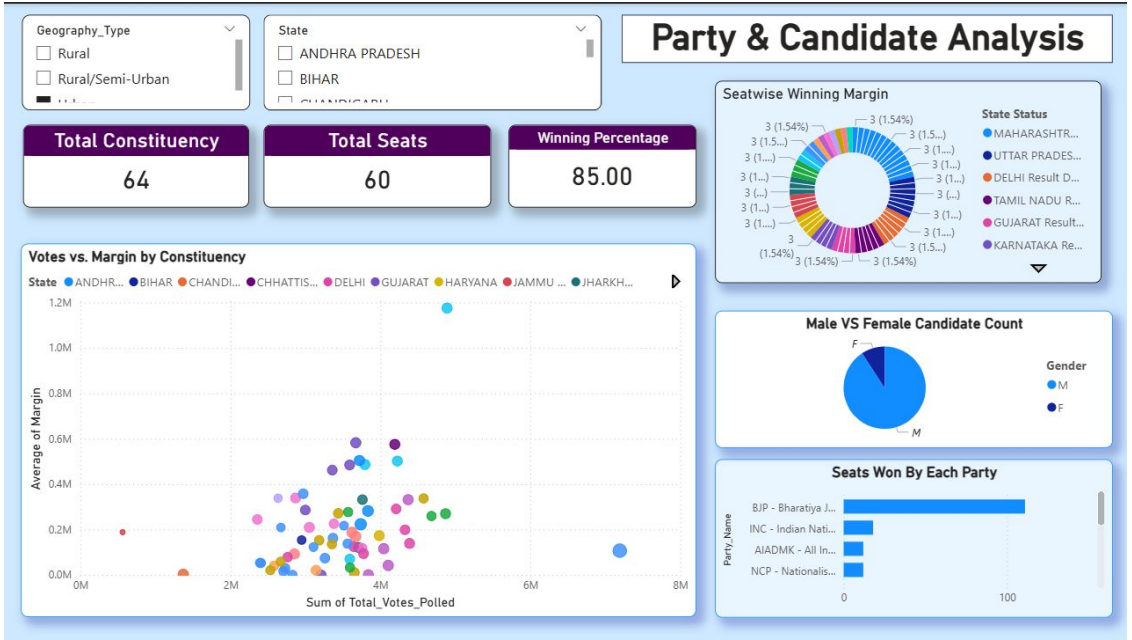
Task 4 - Turnout & Demographic Analysis



Focus: Understanding "Who" is voting and "Where."

- **The Big Picture:** 67.38% overall turnout from a pool of 1 Billion registered voters.
- **Urban vs. Rural:** Visual evidence that Rural turnout (approx. 75%) significantly leads Urban turnout (approx. 60%).
- **Age Distribution:** Heatmaps showing the voting strength of the 18-29 and 30-59 age cohorts across various states.
- **Gender Split:** Comparison of Male vs. Female turnout percentages.
-

Task 5 - Party & Candidate Analysis



Focus: Micro-level victory metrics.

- **Winning Percentage:** Benchmarking performance at a 85.00% win rate for selected filters.
- **Margin Analysis:** A scatter plot of **Votes vs. Margin** to identify "landslide" victories versus "close-call" seats.
- **Gender Gap in Candidacy:** A donut chart showing the significant disparity between Male and Female candidate counts.
- **Seat Share:** Horizontal bar charts visualizing seat counts for BJP, INC, AIADMK, and NCP.

Thankyou!
